

# CSE 2140 2nd Language Programming

## RandomNum:

No error message

I forgot what it was doing wrong since it was before the strike but I think it was not giving numbers within the range given by the user

Forgot a bracket after the +1 and a (int) when generating a random number between the numbers the user entered

```
//Print random number between min and max
System.out.println("Random Number: " +
(int)((maximum - minimum + 1) * Math.random() + minimum));
```
