CSE 2110 Procedural Programming 1

NumberSum:

No error message.

My program started printing from 1 to infinity and I had to close eclipse to stop it.

I switched of the variables accidentally making the while loop never end

To fix it I changed the variables

```java
//Printing and receiving all numbers up to user max
while (minNumber < maxNumber)
{
        minNumber += 1;
        System.out.println(minNumber);
        sumNumber += minNumber;
```
